*VAS capabilities inspiring VAS opportunities*

The VAS team at IP utilizes the suite of design and design management software offered by Arden Software. The products supported by VAS are integrated allowing for collaboration between the business and our customers.

## What We Do

To understand our Spec Management and Task Management capabilities you have to start with Impact CAD. Both standard and custom designs are generated in the system through a streamlined and fully interactive set of drawing tools. Impact CAD allows our users to both create and import designs and graphics from virtually any other system. Impact CAD allows our Design team to create 3D samples and animated prototypes that can be shared with the customer, enabling them to see exactly how everything fits together.

VASCONNEX

## Database

At the heart of the Design system is the Impact database which is unique to the packaging industry. All designs and the complete history is stored in a highly configured database. This allows our team to share designs not only with other designers, but is capable of contributing to a high-level automation and integration.

## Enterprise

Utilizing Arden's Enterprise Database Services allows IP to apply standardization of design functionality, and to literally collaborate with other designers all over the world. Enterprise reduces duplication efforts and ability to search for designs on a broad criteria.

## VASconnex

VASconnex completes the puzzle for the complete customer packaging solution. This web design portal allows internal as well as external customers to view their most updated CAD design. With VASconnex we have the ability to download specs or access stored documents available 24/7 via the web, bridging that gap between Sales, Manufacturing and Design.

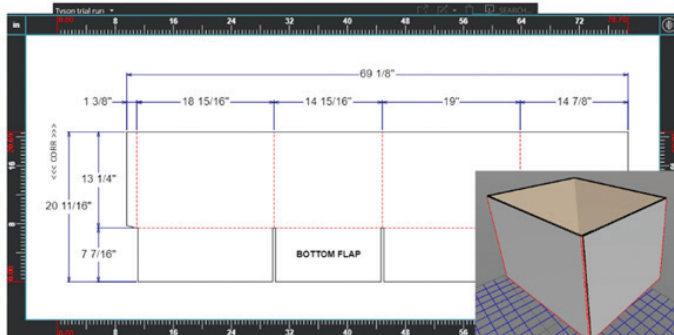

Our customers can be brought into the approval process to improve speed to market. VASconnex will give them the option of viewing work and providing instant feedback of approval or reject.

Our suppliers can self-serve and download the designs files and information they need to create art work or die tooling without troubling your busy workforce.

Real time information enables you to make effective decisions when they're needed to boost efficiency and customer satisfaction.

- **Manages** individual's and teams' task/to-do lists within an intuitive dashboard
- **Customizable** task forms capture the right information the first time with ability to share it
- **Powerful** workflow design tools let us map out your business logic so tasks follow a logical order and start, pause and resume at critical points
- **Minimal training** requirement for new users due to an intuitive interface
- **Built-in** notes/discussion features replace untraceable email exchanges
